Abstract (en)
[origin: EP0664153A1] Mixer for double discharge cartridges or discharge devices with at least two storage cylinders, whole vol. ratio differs from 1:1, has a mixer casing which can be fixed to the cartridge or discharge device and a gp. of mixing coils inside it, both discharge openings which lie next to one another are in contact with the cartridge or discharge device. An entrance chamber (2,14) before the gp. of coils (1,15) comprises a bigger entrance chamber for the first component (A) of larger discharge vol. and a small entrance chamber (11,19) for the second component (B) of smaller discharge vol., the smaller chamber is so designed that upon exiting the input chamber, the first component (A) encloses the second (B) and the first inlet edge (10.20) of the first coil (9,21) splits both the first (A) and second (B) components in half.
