Abstract (en)

A method for positioning the edges of two cloths (1,10) to be joined by means of a stitching line in a sewing machine, characterized in that, during a first step, a longitudinal enlarged portion (9) that is continuous over the entire length to be joined of the edges is formed along each edge; in that, during a second step, the enlarged portions (9) are guided through respective guiding channels that guide them so that when the enlarged portions (9) exit from the channels they are parallel and adjacent; and in that, during a third step, when they exit from the channels, the edges are joined to each other by means of stitching lines that run along the longitudinal enlarged portions. <IMAGE>
