Abstract (en)
[origin: EP0665035A1] The binding (7) is fixed at the rear end of a bending-resistant lever plate (3) which is attached at the other front end for swivel movement on the ski (1). In the middle area of the lever plate between the top of the ski and the underneath of the plate is a pressure member which holds the plate at a distance from the ski. The bearing support (9,10) for the boot is raised by the new distance between the ski binding and top side of the ski. The pressure member is preferably displaceable in the longitudinal direction of the ski and can be vertically adjustable.
