Abstract (en)
   [origin: EP0665106A2] An ink jet printing device is formed from silicon or similar material. The device is formed on a first plate (10) having an ink
   duct groove (11) and ink jet nozzles (15) communicating with the duct (11). The groove is closed by a second plate (16) having diaphragms (23)
   formed integrally therein, the diaphragms (23) being opposed to passages (12) to the nozzles (15). The diaphragms are movable between positions
   in which the passages (12) are open and closed respectively by heating of the diaphragms or by heating liquid in a closed reservoir (21) behind
   each diaphragm. <IMAGE>
