Abstract (en)
[origin: EP0665350A1] The device is for a bearing housing (1) which, in the area of the recess, is provided with a bearing bolt (1d). A tab (4) on the bolt is rotatably located on the inside of the door panel (3), which in its holding position is fixed by a stop surface (5b) formed on the housing of the rod lock. The drive component for the rod lock is fixably located on the bearing housing on the rod lock. The housing of the rod lock is fixed by a screw engaging in the drive component. Via the screw at the same time a bolt tongue is fixed on the drive component.
