Abstract (en)

[origin: EP0665355A2] The arrangement has a frame strap part for fitment on the front surface of the fixed frame. It has a panel strap part intended for fitment on the front surface of the panel. A strap pin vertically fitted in the application position engages in the strap parts in order to pivot them hingedly against one another. The strap parts (3,4) are of aluminium and are provided on the fixed frame and the locking components (14,15) of steel on the panel. On closure of the panel the strap parts can be brought to engagement on their facing edges so that the panel is blocked against movement vertically out of the lock position.
