Abstract (en)
[origin: EP0665359A1] The lamella shutter has an outer frame (1) and several lamellas (4) inserted between two vertical arms (2,3) of the outer frame to which they are relatively pivotable. On the vertical arms are bearer strips (5,6) with bearing pins (13,14) located centrally on the lamella end pieces (11,12), which are located in corresp. bearing accommodations (15,16) of the bearer strips. An operating component (27) as drive rod is provided for the pivoting of the lamellas. The bearer strips are movably located in or on the vertical arms in the lamella longitudinal direction between two end positions. They only release the inserted lamellas when they have a specific min. distance from one another.
