Abstract (en)

[origin: EP0666226A1] The trolley has a vertical arm (2) with a roller running on a rail and a similar arm (20) running behind on the same rail and supporting below them a horizontal rod (3). At the front of the first arm, near the bottom is a U-shaped ear (8) projecting forwards. At the bottom of the second arm is an axle (71) which can be adjusted in height, with a coupling finger (72) which points to the rod in its neutral position. When the axle is lowered, a boss stops the rotation of the finger. The finger is used to attach the ear of the next trolley on the rail.
