Abstract (en)
[origin: EP0666398A1] The device and has at least one stop arm (1) which at one end is pivotably and longitudinally displaceably located on the pane or panel and at the other end is releasably couplable with a pivot bearing (3). It comprises a bearing support (4) fixable on the window or door frame and a panel or panel part (5), which is pivotably connected with the bearing support by a link bolt penetrating a casing (7) of the pane or panel part. The securing component comprises a leaf spring (15) fixed to an angled arm (2), which via the free end (17) of the arm has an extension piece (18) bent in the direction of the basic stay (13) of the groove (10) of the fixture lobe (9).
