Abstract (en)

[origin: EP0666416A1] The injection quantity of the fuel into the combustion cylinders is determined by a quantity controlled feed device (120). The quantity controlled feed device is formed as a flow regulator connected ahead of the fuel pump (6), which has a throttle valve operable from a control appts. (31) with or without position feed-back or a timed closure valve. For the throttle valve of the flow regulator a series-arranged pressure correction throttle valve, which alters the pressure drop over the throttle valve, so that after the flow regulator the required theoretical pressure always exists.
