Abstract (en)
A high-tension transformer comprises a high-tension coil part (30), and a low-tension coil part (24) which is inserted in a through hole (30a) of the high-tension coil part (30). The low-tension coil part (24) has a cylindrical bobbin (25), a plurality of section collars (26, 27) which are formed on an outer peripheral surface of the cylindrical bobbin (25) at prescribed intervals along its longitudinal direction, and a plurality of lead wires (28) which are wound on regions between the plurality of section collars, while the cylindrical bobbin (25) is provided in a forward end side of its outer peripheral surface with a tapered portion (26a) which is tapered to approach the outer peripheral surface of the cylindrical bobbin (25) toward the forward end portion (25a). <IMAGE>
