Abstract (en)
[origin: WO9410407A1] The invention pertains to an eaves gutter mount (10) with a bridge guide (18) which engages the eaves gutter (16) from below and which is connected to a fastening rail (14), which can be fastened to a building, by means of a clamping fixture (42) which permits direct height and angle adjustment, where the bridge guide (18) has a section with an oblong hole (30) which extends vertically. It is proposed that the fastening rail (14) be made of a flat material whose surface runs parallel to the longitudinal axis of the eaves gutter (16), that the end section (32) of the fastening rail (14) facing the bridge guide (18) is tangent-bent toward the bridge guide (18), that the bridge guide (18) has a roughly T-shaped cross section whose flange-shaped section (22) is flatter at the free end (24) of the bridge guide (18) than at the building-side end (26) and that the oblong hole (30) in the flange-shaped section (22) is situated at the building-side end (26) of the bridge guide (18).
