Abstract (en)  
[origin: US5671192A] PCT No. PCT/EP93/02983 Sec. 371 Date Apr. 26, 1995 Sec. 102(e) Date Apr. 26, 1995 PCT Filed Oct. 27, 1993 PCT Pub. No. WO94/10612 PCT Pub. Date May 11, 1994A radio-controlled, analog display clockwork has at least two pointers and is driven by an electric driving arrangement. A pointer setting arrangement is provided for the user to bring the pointers of the clockwork to a predetermined position which corresponds to a certain time. Starting from said predetermined pointer position, the control device applies control signals to the driving arrangement, causing the pointers to move more quickly until they have reached a position which corresponds to the instantaneous time.
