Abstract (en)

[origin: EP0667190A1] The sieve plate comprises holes whose axes are inclined to the plane of the plate. The sieve plate has lines (2-5) and along the longitudinal direction of each line, it has wave-shaped peaks (6,6',9,9') and troughs (7,7',10,10') which join to each other. In particular holes (11) are formed by aligning peak (6) and trough (7) portions of sinusoidal indentations, which perforate the plate, in adjacent rows.
