Abstract (en)

[origin: EP0667292A2] The form body (1) is formed as a shell with several compartments (2,3,4) and comprises a single section. The dividing walls (5,6) between the compartments are formed by double folds of the section. The corner areas located between the dividing walls and the adjoining sidewalls (10-17) reduce the excess form body material and are foldable against the outside and inside of the upright sidewalls, being fixed to them by insert folds (39). The insert folds are made of the double type. The fold lines of the insert folds enclose with the adjacent edges of the side or dividing walls an angle of 45 deg. The narrowing ends of the insert folds evolve into a blunt end edge (41).
