Abstract (en)

[origin: WO9410187A1] This invention provides a novel purified TGF- β binding glycoprotein, endoglin, and isolated nucleic acid molecules that encode amino acid sequences corresponding to the TGF- β -binding glycoprotein. Also provided is soluble endoglin-derived polypeptide, and fragments thereof. A pharmaceutical composition which comprises the purified endoglin-derived polypeptide or produced recombinantly methods and a pharmaceutically acceptable carrier is further provided as well as methods of treating patients by administering to the patient the pharmaceutical compositions of this invention.
