Abstract (en)

[origin: EP0668037A1] The device has a cover adjoining an edge (16) of a guide tube (2) holding the guide sleeve (1) has openings (13) which project over this edge (16) and are suitably dimensioned to take a work tool. The guide sleeve has on the outside spaced rib webs (5) connected together by a reinforcement web (17). This reinforcement web is formed adjoining the cover to contact nose-like projections (20) which are cut out of the inner wall (6) of the guide tube between the rib webs. A ring web (15) adjoining the inside (14) of the guide tube and connecting the rib webs can be formed integral with the reinforcement web to form with same a flush surface facing the cover and forming a bearing face for the projections.
