Abstract (en)

This application describes a device for fixing a tubular membrane to the ends of a pneumatically operated rotating drum on presses of the type specially suitable for pressing fruit. The device comprises a first ring plate which is positioned at each end of the drum. The device also comprises a second ring plate which permits the ends of the membrane to be secured to the first ring plate from inside the drum. The device is both structurally simple and permits membranes to be fitted and removed quickly. <IMAGE>
