Abstract (en)  
[origin: EP0668238A1] The jib profile has an upper half which has a box like cross-section and a lower half with a rounded cross-section. The lower section has at least one even wall section (15) which is provided as an inclined inwardly running even edging symmetrical to the vertical gravity axis (ly) on both sides of the lower section. Between each inclined inwardly running edging and a horizontal rib (17) a circular arcuate walling section. The radius (R1) of the circular arcuate wall section has its circle centre point (K1) at the point of intersection of the vertical gravity axis (ly) and the horizontal gravity axis (lx). The radius of the circular wall section has its circle centre point at the same distance from the vertical gravity axis and the horizontal gravity axis, but below the horizontal gravity axis.
