Abstract (en)

[origin: EP0668405A1] The stabiliser consists of a prismatic body (10) with one self-supporting side wall (2), and further side walls (3,4) formed by a bearing mat (8) with openings (7). The mat is in one piece and also forms the self-supporting side wall. The side walls enclose a material layer (6), which promotes plant growth, and a core (9) of a soil-like material. The ends of the mat are connected to each other to support a carrier element (12). The mat is lattice work, and the prismatic body is a three- sided prism.
