Abstract (en)

[origin: GB2255485A] An aerodynamic bait container of two complementary halves, is attached to the line and substitutes for the standard casting weights currently employed. There is a residual weight to anchor its position when the container springs open when in the water. At casting the container is held shut against its spring hinge by means of poly vinyl alcohol or similar material that dissolves on contact with water. The container itself may be made of an organic soluble substance. <IMAGE>
