Abstract (en)

[origin: WO9407412A1] An electrode support for use in an intraventricular cardiac diagnosis and treatment includes at least one elongated spline (76) that carries at least one electrode (22). The spline has a rectangular cross section. It has a substantially greater width than thickness. The spline can be flexed in one vertical plane that passes through its longitudinal axis. The spline resists twisting and resists flexing in all other planes passing through the axis.
