Abstract (en)  
[origin: CA2149668A1] The invention describes a container (1) with a base (2) and side wall parts (3 to 6) connected therewith so as to be orientable from a position approximately vertical to the base (2) into a position flat with the base (2). The side wall parts (3 to 6) are connected with the base (2) via articulation arrangements (8) arranged in the region of the encircling longitudinal and transverse side faces (7). In addition, connecting arrangements (35) are arranged between the side wall parts (3 to 6) corresponding to the longitudinal and transverse side faces (7) and are constructed by a coupling device. This coupling device projects in the direction of an overlapping region (31) of the further side wall part (3 to 6) arranged at 90.degree. and has centering and/or locking elements, in the overlapping region (31) of the further side wall part (3 to 6), centering and/or locking mountings holding these. Between the side wall parts (3 to 6) and/or between these and the base (2) a locking device is arranged, which exerts a prestressing force directed in the engaging direction of the centering and/or locking elements. Use Fig. 1 for
