Abstract (en)

[origin: EP0669148A2] The screw head of the tension rod is formed as a coupling screw (26), and is coupled to a cap (28) placed on it. The cap is fitted into a removable housing section (16), so that it may be turned from outside. Two sole retainers (18) are connected pivoted via a hinge pin (22). The tension rod (24,26) engages on the hinge pin. The coupling screw has a coupling section, which consists of a circular disc with several projections. The cap has a funnel-shaped coupling part with grooves. These are aligned with the projections in the coupling screw.
