Abstract (en)

[origin: EP0669209A1] The cylinder (1) is detachably connected and is centred at the end side to an inner ring (5) of the bearing which is set in the frame (2). The cylinder and inner ring can be fixed to connecting elements (6) by a centring device (8) and planar surface (7). The cylinder can have a stud end (12) which forms the circumferential centring with the inner ring. The cylinder can have inside the cylinder shoulder a centring member with which the inner ring and centring is associated.
