Abstract (en)

[origin: EP0669260A1] The packet has two carrying-handles (5,6) next to the top fastening (2) which form part of the front (3) and back (4) wall of the package and lie flat against their outer surfaces when not in use. The top end fastening is formed by a folded-over part formed by folding over the end of the middle walls (3,4) of the packet. The transverse fold line (20) of the handle (6) belonging to the back wall runs beneath the folded over part parallel to the edge (21) next to it. The front and back walls comprise at least two layers of material (7,8;9,10) the outer layer of which forms the handle by a U-shaped stamped out piece of material, and the inner layer keeps the interior closed.
