Abstract (en)

[origin: EP0669268A1] The container has a valve (2) with a control rod (11), and a push button in the form of a cap (4) with an inner stem (5) to operate the valve rod. A duct (6,7) is connected to an outer nozzle (8) in the side of the push button. The push button is made in one piece with a retaining ring (23), to which it is connected by a band of thin flexible material which can be continuous or in segments. The underside of the cap has a thrust foot (20) which interacts with the top of the container (3) on the nozzle side and allows the cap to tilt to operate the valve on the other side.
