Abstract (en)
[origin: EP0669443A1] The slideway is prefabricated from a plastics material, and has a trough to receive the shutter and holes (4) for fixings. It also has clips (5) for engaging with holes made in the sides of the piece of furniture, with each clip made from two tongues with chamfered outer surfaces, separated by a gap. The tongues are situated parallel to the walls of the trough and lie at an equal distance from its side walls, allowing the clip to be in an inverted U-shape. The trough of the slideway can be made with a central ridge (12) which supports the shutter as it is being opened and closed.
