Abstract (en)  
A rotomolded speaker enclosure system which functions both as an acoustically accurate speaker box and an integral part of a waterproof and virtually shock proof transport combination wherein at least two speaker boxes are locked together along a water-tight seal. The speaker motors in the combination are facing one another to avoid damage. Moreover, the rotomolded speaker enclosure provides recessed speaker mountings so that speakers are protected from flat impact while in operation. <IMAGE>
