Abstract (en)
[origin: WO9503226A1] The invention relates to a container (10) with a closure (12) fitted on the neck (11) of the container by a left-hand thread (13) and a locking device (14). The closure (12) may also have an extension (19) which is secured to the closure (12) by webs (22). The material of the container (10) is softer than that of the closure (12). In the event of an attempt to open the container by exerting force on the extension (19), the webs (22) break and the closure (12) with the extension (19) are destroyed. If the force is exerted on the closure (12), the neck (11) is torn off the container (10), which is thus destroyed. The invention provides a simple container (10) which is safeguarded against tampering with the contents.
