Abstract (en)

[origin: WO9412804A1] Disk brake comprising a yoke (1), a caliper (2) slidingly mounted along a member (3) and a key (5), and a spring (9) which tends to separate said caliper from the yoke. The spring (9), which has a wire-like structure, includes an end (11a) bearing on the caliper arch and facing opposite the sliding direction (D) of the caliper in relation to the yoke once the brake is actuated, the spring thereby efficiently returning the caliper to its rest position.
