Abstract (en)

[origin: WO9501543A1] In a heater consisting of heating elements (3, 4, 5) and supports (1, 2) secured together by connectors, the latter consist of pairs of components (1c-2b, 1a-9a, 1d-10a, 2a, 11a) which mutually complete one another, one of them being integral with a heating element and the other with a support. The joint between the completing components which form a pair is made by a force-fit. Two mutually completing components may be tapered elements or a spring and groove with a conicity of about 5 per thousand.
