Abstract (en)

[origin: EP0670216A1] The method is for the control of ink issue in the prodn. of printed products on printing machines, partic. on a sheet offset printing machine, with which the feed rate of a fluid to be applied to a print form occurs dependent upon the speed of the printing machine. After issue of a command altering the speed of the printing machine, firstly the feed rate of the fluid is altered after a specific time function, and after a specific number of machine revolutions the speed alteration of the printing mechanism is effected. With a sheet offset printing machine, the alteration of the speed value of a moisture ductor is introduced before the speed alteration of the main drive.
