Abstract (en)

[origin: EP0670262A1] The raft buoyant body is constructed from tubes (4,5) located one above the other, and the tubes side sections (8) lying on the outside of the raft, and the corresponding side sections on the inside, fit into each other in one piece. The inner and outer side sections lying between the two tubes are interconnected respectively. Both side sections are interconnected on the upper and lower edge of the buoyant body (1). Strips (13, 14) are fitted between the inner and outer sides at the point where the upper tube interconnects with the lower.
