Abstract (en)
[origin: EP0670383A1] The stretch fabric, for orthopaedic bandaging and the like, has an increased elasticity along the warps (A), which are cladde yarns with a unified weave. Two series (B,C) of ground yarns are of textured synthetic filaments, woven to float and be visible at both surfaces. At least one series uses a basic filament as thin as possible. The bonding filament, of synthetic texturised filaments, are in a taffeta weave to maintaining the line of the stretch warps (A) and lock the ground series (B,C).
