Abstract (en)

[origin: EP0670390A1] A locking arrangement for access covers to service ducts has one master cover (3) with a lock (30) operated with a key from the outside. Other slave covers interlock with the master or the frame (1) so they may only be used when the master is unlocked or moved. Covers have pins (20) fitting in slots (12) or stops welded on the frame. Slave covers are available with spring loaded bolts on one long side fitting strike plates on the frame and pins on the other locking with adjacent covers or frame. Double triangular covers also available.
