Abstract (en)
[origin: EP0670398A1] The angle profile rail has a fixture arm with large surfaced stamped holes for the input of adhesive or mortar. Standing out from this arm is a closure arm with a profile height which is less than the profile length of the fixture arm, whereby the stamped holes in the fixture arm in the rail longitudinal direction have a repeating pattern. Each repeating pattern of stamped holes, apart from the at least one large surfaced adhesive passage opening (16) has at least one fixture hole (18,20) which has an essentially smaller cross section than the opening.
