Abstract (en)
[origin: WO9411598A1] A car park installation has boxes (20) arranged in two adjacent high bays for parking private cars. A stacker (64) movable in the longitudinal direction in the corridor (14) between the high bays has a conveyor table (70) which is telescopically mobile both in the vertical and horizontal directions. A drive-in and drive-out station (24) with support forks (30) on both sides which project into car track area is located by a high bay (10) on the side opposite to the corridor. Complementary transport forks (36) of a lifting platform (34) are movable between the support forks (30) in the vertical direction and in the horizontal direction with respect to a high bay box designed as a transfer platform (50). On both sides of the transfer platform (50) and of all high bay boxes (20) are support forks (51 or 86) which cooperate with transport forks mounted on both sides of the conveyor platform (70) for taking up and delivering private cars.
