Abstract (en)

[origin: EP0671228A2] The mechanism for transfer of workpieces (26) in a transfer or similar press includes two carrier or gripper rails (30,31) which by means of a drive mechanism are movable in the longitudinal direction (38) of the press, a stroke mechanism for vertical displacement of the workpieces, and means for lateral displacement of the gripper rails relative to one another. The gripper rails are provided with seatings for fastening alternatively a cross beam equipped with suction elements or similar devices, or gripper units. Switchable cam-controlled drives or programmable individual drives are foreseen for the motion of both the cross beam and the gripper units.
