Abstract (en)
[origin: EP0671330A1] The labeller has a feeder device to move the print blocks forward incrementally. The device is operated by a pivotally supported, feeder lever. The feeder lever (28) is connected to one of the wheels of the wheeled printer or strip deflector wheels (22) of the strip printer (4). The feeder lever is mounted on a wall of the printer's housing (18) and is connected by a drive mechanism (32, 33) to the drive shaft (34) of the feeder. The drive mechanism consists of two at least partly toothed wheels. The first wheel is fixed to the feeder lever and turns on its geometric pivot axle (31). The second wheel is fixed to the concentric drive shaft of the feeder.
