Abstract (en)
[origin: EP0671508A2] The blocks or plates (2) are additionally secured by tensile anchors (6). The anchors are fitted into recesses (3) in the upper surfaces of the blocks. The recesses can be designed to extend away from the edges or corners of the blocks, and can have enlarged cut-outs at their rear ends. The anchors can be made to reach downwards from the upper surface, while retaining much of their cross-section. The cut-outs may be of circular, trapezoidal or rectangular cross-section.
