Abstract (en)

[origin: EP0671517A2] The prefabricated component has front (1) and rear (2) walls, between which ventilation channels (3) run. The walls are separated at a distance of 2 - 15 cm by perpendicular separating walls. At least the rear wall is designed to be permeable to steam, and the front wall consists of a material which can be screwed, nailed, papered and plastered. The walls can be made of a bonded, porous, light construction material. The upper and lower edges of the component can be formed with tongue and groove profiles, which may be asymmetric, and which may include places for accepting mounting brackets.
