Abstract (en)

[origin: WO9510156A1] A base station includes a tuner and teletext decoder (32) which outputs composite video, audio and raw text data at (36, 37 and 39), along a cabling infrastructure (40). A remote PC (41) has a capture card to receive and display the video picture and assemble the text data into a picture which is stored and displayed as required. The PC also displays a control application window which, by pointing and clicking with a mouse (45), allows control signals to be sent to the tuner (32) to select channels and pages via a microcontroller (34). The text information is subjected to an error checking and retransmission protocol at the PC.
