Abstract (en)
[origin: EP0672463A1] The paint roller consists of a plastics support bracket (11) fitted with a handle (12), on the front end of which a paint roller (30) can turn. The bracket is linked to the paint roller. The plastics of which the bracket is made may be at least partly reinforced with glass fibre. The handle may also be made of plastics and in one piece with the bracket. There may be a longitudinal slit (14) in the free end of the bracket, so that at least two spring tongues (15) are formed, with a fitting nose (15a) at the free end.
