Abstract (en)

[origin: EP0672504A1] The screwdriver has a base body with a shaft for turning the screw. In its free end face there is a radial groove to take the screw hook. There is also a diametrical groove (12) in the free endface (7) of the base body (1) in the form of a circular disc segment to take an open or closed screw lug. The radial groove (9) and the diametrical groove (12) are at a right angle to each other, forming a T-shaped aperture in the free endface. Either or both grooves may become narrower. There may be a smaller radial groove (11) in the middle of the main radial groove.
