Abstract (en)

[origin: EP0672566A1] The system uses trucks which have a bogie at each end (6,6') and a covered platform (100,101) pivoted between the two ends which enable the ends of the trucks to be opened by running the bogies along parallel rail tracks (21,22) by means of points (23). Once the truck bogies are on the parallel rail tracks the open ends of the trucks lie at an angle to the tracks and they can be loaded/unloaded from either end using suitable road vehicles.
