Abstract (en)

[origin: EP0672811A1] The faulty operation stop (3) is for the operating bar (7) of a window or door adjustable to several different switch positions, where the window or door has a rotary top pane or panel with arms of metal and/or plastics profiles. A housing (14) guiding a slide (15) against the effect of a spring (31) can be fixed to the pane or panel. The slide on the one hand supports a stop component, which is held by the spring in the movement path of counter stop components on the operating bar and on the other hand has an adjustment stop (23), which is fixable against a counter bearing on the other window or door member, e.g. on the blind frame.
