Abstract (en)
[origin: EP0673049A1] The switch has at least one spring-biased push-button element (12), fitted with a front push-button cap (28) for operating at least one pair of contacts, contained within a respective chamber provided by a base, together with the corresponding terminals. A top part (14) fitted to the base has a release button for the contacts and a vertical guide for the push-button element, together with a lamp recess (31). The push-button element is provided by a cylindrical shell projecting beyond the top part, with a cross-section corresponding to the surface of the top part, at least the projecting part being transparent, as is the front push-button cap.
