Abstract (en)
[origin: EP0673616A1] The assembly frame has two structural groups (1,2) containing at least one pair of horizontal profiled members (10,11) to allow infinite adjustment and then connection by connecting means (16). The two structural groups each have a vertical corner profile (4,5) so that the first profiled member (10) can be connected to one corner and the second profiled member to the other corner. The second profiled member slides in the first hollow profiled member. The corner profiles have oblong hole recesses (6,7) to connect with another assembly frame or to a frame wall. A fixing body (24) with fixing element for the panel plate is mounted on at least one profiled member.
