Abstract (en)
[origin: EP0673617A1] The support is made of plastics or hard foam such as polystyrene or polyurethane foam and has along the long sides (7,7') near the base recesses (8,8') closable by shaped parts (11) which fit snug into the support. The shaped part at the back can be removed to allow the pipes to be fitted in the recess. An inspection opening for a siphon can be formed in the support base. The support base can have ideal break points arranged so that at least a part of the base can be removed to form a further inspection opening. The removable part should have the same dimensions as the existing inspection opening so that it can be used to close up the unrequired opening depending on the design.
